Project description:

The works comprised the erection of a steel framed building to provide office, welfare and plant storage. The external walls were clad in a combination of profiled metal and larch cladding with the roof being an insulated profiled sheet on steel purlins. The building is complete with a full mechanical and electrical fit out with the offices and welfare facilities receiving ceiling, wall and floor finishes as appropriate.

The external works comprised a large concrete finished yard area with facilities for skips, wheel washing and fuel storage.

The provision of the water mains involved bringing the supply onto site from almost one mile away with the electric supply being brought onto site through the adjoining cemetery.

Project:

Contract period: 40 weeks
Value: £771,428
